# Cabernet Sauvignon

NEW SOUTH WALES

NEW SOUTH  
WALES

At Reynolds Vineyards, we pay careful attention to growing the best grapes and making wines that accurately represent the characteristics of their respective regions.

A collaboration with a distinguished Australian wine producer from New South Wales and South Australia, Reynolds Vineyards offers a range of wines brimming with personality and regional character. Reynolds wines are full of fruit, deeply colored and wonderfully food friendly.

## Vineyard Information

This elegant Cabernet Sauvignon comes from grapes that were grown in the cool-climate Orange region of New South Wales, Australia. Our vineyards lie at the base of Mount Canobolas, an extinct volcano, which provides rich basalt loam and limestone soils ideal for balanced vine growth. The vineyards enjoyed outstanding conditions over the 2002 vintage and growing season. Rainfall was below average, and the vineyards received some late frosts. Summer was warm and dry requiring close monitoring of soil moisture levels. This weather pattern continued into Autumn until light rains brought relief to the vineyards. Vintage began in the third week of February with excellent fruit flavors on the vine.

## Winemaking

After harvesting and crushing, the grapes were cold soaked for two days to maximize color extraction. The must was then inoculated with a red wine yeast designed to enhance color and mouthfeel. During fermentation, maximum color, flavour and tannin were extracted by utilizing daily rack and return procedures. After 18 days, the fermentation completed, and the wine was transferred to French oak barriques, where it aged six months prior to bottling.

## Tasting Notes

Deep, lush cherry and cassis, with a smooth, richly fruity finish. It's beautiful with roasted and grilled meats, hamburgers, and hearty pasta.

## Wine Information

Composition: 100% Cabernet Sauvignon

Alcohol: 13.5%

Total Acidity: 0.62g/100ml

Residual Sugar: 0.25g/100ml
